Industrial Engineering

Indices, 1991
Volume 23

Microfilm copies of articles are available from University Microfilms International, 300 North Zeeb Road, Ann Arbor, MI 48106. Paper copies can also be obtained from the Publications Order Department, IIE, 25 Technology Park, Norcross, GA 30092, Phone 404-449-0460, for $4.00 each, prepaid.

Subjects And Titles

ACTIVITY-BASED COSTING
New cost management tools offer competitive advantage; Sutton, John R.; September; p. 20.
IEs can improve management decisions using activity-based costing; Barnes, Frank C.; September; p. 44.

AUTOMATIC IDENTIFICATION
1991 automatic identification buyers guide; May; p. 51.
How auto ID standards evolve; Fales, James F.; April; p. 14.
How important is one ten thousandth of a second?; Fales, James F.; June; p. 18.
Intelligent foundation for product design reduces costs, time-to-market: Part 1; Izuchukwu, John I.; July; p. 29.
The portable database, part II; Fales, James F.; January; p. 18.
Making machine setups easier; Fales, James F.; August; p. 17.
Major industries work to consolidate auto ID components; Ferguson, Gary; October; p. 21.
The wave of application generation software is breaking on auto ID; Fales, James F.; October; p. 22.

BUSINESS INTEGRATION
Manufacturers must prepare for international quality initiative; Boznak, Rudolph G.; October; p. 13.

CAREER
Plan for the survival of your career; Ransom, William J.; August; p. 20.

COMMUNICATION
Here are some key moves to improve relationships between manufacturers and distributors; Roe, Mark; April; p. 32.
It is your job to communicate well; Ransom, William J.; April; p. 16.

COMPUTER APPLICATIONS
An algorithm for a tandem queueing model with feedback operation; Noh, Yong D.; Herring, Bruce; February; p. 53.
Is your CAD system a true"system"?; Fyda, Jr., Lou ; April; p. 39.
A program to analyze prototype steady-state queues; Griffin, Walter C.; March; p. 73.
Spreadsheets are the answer for handling low cost PC-based applications; Alloway, Jr., James; January; p. 44.
Utilize expert systems as teaching assistants; Godin, Victor B.; Rao, Ashok; January; p. 50.

COMPUTER-INTEGRATED MANUFACTURING
Today and tomorrow: speaking the language of the factory; King, Leslie; November; p. 18.
The components of a successful CIM implementation; Aletan, Samuel; November; p. 20.
Switzerland establishes CIM centers to study technology and boost industry; Rodriguez, Moises-Enrique; Nov.; p. 23.
Function goals are often in conflict with each other; Weston, F.C. "Ted" Jr.; November; p. 25.

COMPUTER MODELING
Using a personal computer for business modeling; Jarrett, Jeffrey; December; p. 35.

COMPUTERIZED INFORMATION SYSTEMS
High performance computing in the 1990s; December; p. 33.

CONCURRENT ENGINEERING
New roles for manufacturing in concurrent engineering; Whiteley, Linda; November; p. 51.
Organizing for a successful Concurrent Engineering process; Siegal, Bryan; December; p. 15.

DISTRIBUTION
Distribution function is now supply-chain integrator; Hall, Jim; September; p. 18.
The right linkages mean better distribution decisions; Hall, Jim; November; p. 16.

ELECTRONIC DATA INTERCHANGE
The competitive marketplace of the 90s: a perfect setting for EDI; Stamper, Bonney; October; p. 25.

EMULATION
Emulation is new diagnostic tool for dynamic testing; Voller, L.A., Webster, Peter; December; p. 14.

EXPERT SYSTEMS
The design team approach to class "A" engineering is working for Digital; Izuchukwu, John: January; p. 37.
Developing an expert system to choose a sort sub-system; Luxhoj, James T., Forsythe, Lisa M., Kazunas, Stephen; August; p. 22.
Artificial intelligence can reduce product cost by optimizing design decisions, part II; Izuchukwu, John; August; p. 42.
Step-by-step procedures provide a beginning in developing an expert system; Ntuen, Celestine A.; October; p. 33.

FACILITIES PLANNING
Six-step approach to planning warehouse space without drafting a facility layout; Suskind, Peter B.; September; p. 25.
A moving experience: relocation plan has minimal disruptions for medical center; Hunter, Bruce, Kucic, Joseph; September; p. 29.

FACTORY AUTOMATION
Carnation aims for smooth and creamy process with state-of-the-art systems; Attaran, Mohsen, Upthegrove, Carl E.; September; p. 38.

FLEXIBLE MANUFACTURING SYSTEMS
Back to basics: just what is involved in implementing a flexible manufacturing system?; April; p. 43.
Developing an industrial engineering-based flexible manufacturing system; McDermott, Kevin J.; December; p. 28.

IIE
IIE Annual Report 1990-91; July; p. 55.
IIE 1991-92 board of trustees and organization charts; June; p. 49.
IIE officers: 1991-92; March; p. 68.

INDUSTRIAL ENGINEERING AND IEs
An academic-industry interface could expand the recognition of industrial engineering; Badiru, Adedji B.; May; p. 47.
Here's how to introduce IE to the pre-college student—it works, but it's not easy; Maleyeff, John; January; p. 40.
The value of certification; Benson, Allen W.; January; p. 53.
Developing a curriculum for IE graduates of today and tomorrow; Ferguson, Gary; November; p. 46.

INFORMATION SYSTEMS
Product standards data system: For online document management; Piyarali, Ali, Galbraith, Jeff, Carter, Kathy Hitsman, Mayfield, David; April; p. 45.

INVENTORY MANAGEMENT
At AT&T, IEs are on the shop floor closing gaps and solving problems; Pulat, B. Mustafa, Cross, R.A.; February; p. 51.
Improving the performance of the performance improvement process at a power company; Eng, Ryder P. , Farr, D. F.; July; p. 51.

JUST-IN-TIME
Hard times: Problems or possibilities?; Sutton, John R.; March; p. 18.
If you don't understand JIT how can you implement it?; Bowman, D. Jerry; February; p. 38.
In pursuit of a fix; Sutton, John R.; July; p. 18.
JIT lockout will cost you customers; Ransom, William J.; February; p. 18.
JIT manufacturing is more than inventory programs and delivery schedules; Gottesman, Ken; May; p. 19.
The new benchmark of competition; Sutton, John R.; January; p. 16.
Roadblocks to change; Sutton, John R.; April; p. 12.
Breaking the gridlock between middle and top management; Sutton, John R.; August; p.19.
Using MRP system to implement JIT in continuous improvement effort; Bermudez, John; November; p. 37.
Sequenced delivery: a true application of JIT; Bukey, Al, Davies, Bill; December; p. 25.

MAINTENANCE
Maintenance operations in Desert Storm: an interview with Col. Davies; Prazak, Steven; October; p. 38.

MANAGEMENT
Building competitive strength: lessons from the chemicals industry; McGaughey, Nick; June; p. 36.
Can a small company really be a winner in the current global competition arena?; Hershkovich, Alan; April; p. 48.
Enlightened management must lay a strong foundation in training new engineers; Parsons, Robert J.; April; p. 34.
Setting the scene for consistency...not fad management; Tompkins, James A.; July; p. 44.
Challenging mainstream IE thinking: the human element; Rossler, Paul E.; September; p. 53.
It's time to start pointing a finger at the real problem: management; Mulgrew, Norman L.; October; p. 42.
The art of delegating is hard to define; Ransom, William J.; November; p. 14.

MANUFACTURING
Configure-to-order computing takes future directions from advances in rules-based systems technology; Dinitz, Michael; June; p. 16.
Cross functional teams improve manufacturing at Motorola's Austin plant; Kumar, Sanjoy; Gupta, Yash P.; May; p. 32. The industrial engineer as a robot project manager can increase productivity; Koop, John E.; June; p. 32.
Rules-based system performs best in configure-to-order; Dinitz, Michael; February; p. 20.
Support and training are the keys to success with rules-based system; Dinitz, Michael; May; p. 14.

MATERIAL HANDLING
Material delivery glitches? Mack Trucks has the answer and it cuts inventory levels; Mazurkiewicz, Greg; February; p. 28.
An on-line parts management system at Grumman produces fact, accurate data; Groppe, William; February; p. 34.
Reusable containerization reduces non-value-added material handling efforts; Speier, Kathy; Sims, Jack; February; p. 30.
Trade shows broaden and continue IE education; Ransom, William J.; June; p. 15.
Diary recounts materials handling progress in developing countries; Sims, Ralph, Jr.; August; p. 27.

MATERIAL REQUIREMENTS PLANNING
MRP application in a small manufacturing company; Torkzadeh, G.; Sharma, Nikhil; June; p. 43.

MRP II
Beyond MPR II: the enterprise solution; Jain, Amit K.; March; p. 33.
How to plan and organize an MPR II project; Hartley, Kenneth; March; p. 41.

Ketema A&E division streamlines operations and improves profitability; March; p. 52.
Making the MRP II decision is tough...but worth the effort; March; p. 58.
MRP II implementations reap strategic and tactical benefits; Trino, Joe; March; p. 46.
MRP II: In the midst of a continuing evolution; Kessler, Jay; March; p. 38.
MRP II provides the answer to handling pressures of growth; Barr, Gary; March; p. 56.
Ten commandments of MRP; Bowman, Jerry; March; p. 50.
Xyplex's continued growth depended upon implementing new MRP II system; March; p. 60.
What your MRP II systems cannot do; Mozeson, Mark H.; p. 20.

PRODUCT DEVELOPMENT

A paradigm shift in product development management; Boznak, Rudolph G.; March; p. 14.
Product development: atomism vs. vitalism; Boznak, Rudolph G.; July; p. 22.
Warning: Don't be half-hearted in your efforts to employ concurrent engineering; Ziemke, M. Carl, Spann, Mary S.; February; p. 45.

PRODUCTION PLANNING

Cost are reduced through build-to-backlog and autoreplenishment systems; Mason, John; February; p. 40.
Production planning at Texas Instruments improves service and reduces costs; Rose, Mark; January; p. 33.
Rapid prototyping offers three-dimensional model design; Montague, R. M.; October; p. 20.

PROJECT MANAGEMENT

Breakthrough thinking—improving project effectiveness; Rigg, Michael; June; p. 19.
Here's a post win technique for estimating on new Department of Defense programs; Schehr, Leonard; April; p. 50.
Match strategies to structure with a project management requirements analysis; Kezsbom, Deborah S.; April; p. 56.
IEs as auditors are project implementation's missing link; Ransom, William J.; September; p. 24.

QUALITY CONTROL

SQC graphics paint the picture of quality control at work; Clark, Richard C.; January; p. 29.

QUALITY MANAGEMENT

Assess your organization's TQM posture and readiness to successfully compete for the Malcolm Baldrige Award; Edosomwan, Johnson A.; Savage-Moore, Wanda; February; p. 22.
The Baldrige award: focus on total customer satisfactiion; Edosomwan, Johnson A.; July; p. 24.
Five critical barriers to successful implementation of JIT and total quality control; Keys, David E.; January; p. 22.
Is "paperless TQM" an oxymoron?; Isbell, Ted S.; June; p. 30.
The quest for quality: a race without a finish line; Rickard, Jr., Norman E.; January; p. 25.
The role of measurement in achieving world class quality and productivity management; Sink, D. Scott; June; p. 23.
How IE training can facilitate implementation of Deming's 14 points; Aikens, C. Harold; August; p. 33.
Organizations can apply quality function deployment as strategic planning tool; Maddux, Gary A., Amos, Richard W., Wyskida, Alan R.; September; p. 33.
American management must change its view of quality as a "necessary evil;" Chatterjee, Sangit, Yilmaz, Mustafa; October; p. 44.
The backside of TQM: how waste indicates haste; Isbell, Ted S.; November; p. 42.
Brain power is Japan's blueprint for the future; Ransom, William J.; December; p. 13.

REENGINEERING

Reengineering: industrial engineering in action; Wilkinson, Richard; August; p.47.

SIMULATION

3-D simulation: A new industry standard; Karami, Michael; July; p. 36.
Cincinnati Milacron benchmarks flexible manufacturing systems via computer modeling; March; p. 24.
Design and analysis of simulation experiments; Law, Averill M.; April; p. 18.
Designing and analyzing simulation experiments; Law, Averill M.; March; p. 20.
Eaton-Kenway uses simulation to cut costs and to offer solutions to customer needs; Cox, Wesley A.; February; p. 25.
Exploring the dimensions of a 3-D competitive manufacturing model; Pulat, Mustafa, Pulat, Simin; July; p. 39.
The many uses of animation and graphics in simulation; Law, Averill M.; January; p. 20.
Simulation eliminates need for an $80,000 machine and conveyor investment; Boblitz, Gerald; March; p. 26.
Teledyne applies simulation to the design and justification of a new facility; Marmon, Craig; March; p. 29.
The three reasons why simulation fails; Keller, Lucien, Harrell, Charles, Leavy, Jeff; April; p. 27.
You can use simulation to make the correct decisions; Singh, Durgesh K.; May; p. 39.
Simulation combined with IE principles can boost productivity in small business; Lewis, Joseph F.; July; p. 46.
Simulation study puts the right heat on at Kaiser Aluminum; Law, Averill M.; June; p. 16.
Documentation makes model in simulation more real; Law, Averill M.; August; p.15.
Proper management techniques are keys to a successful simulation project; Ulgen, Onur M.; August; p. 37.
Simulation model's level of detail determines effectiveness; Law, Averill M.; October; p. 16.
Manager's role is significant in simulation modeling; Law, Averill M.; December; p. 12.
On-line simulation for real-time scheduling of manufacturing systems; Rogers, Paul, Flanagan, Maureen T.; December; p. 37.

SYSTEMS DESIGN

An IE's perspective on designing a complex shipyard production design system; Foster, Bruce O.; August; p. 30.

TOTAL PROCESS MANAGEMENT

Involved in systems evaluation? Use a multiattribute analysis approach to get the answer; Dicker, Paul F, Dicker, Michael P.; May; p. 43.
Total process mangement..or, the art and science of competitive positioning; Russell, William R. Jr.; May; p. 28.
Want to be more competitive? Concentrate on attacking non-value-added-wastes; Mather, Hal F.; May; p. 22.

Authors

Aikens, C. Harold; How IE training can facilitate implementation of Deming's 14 points; **August;** p. 33.

Upthegrove, Carl E., Attaran, Mohsen; Carnation aims for smooth and creamy process with state-of-the-art systems; **September;** p. 38.

Voller, L.A., Webster, Peter; Emulation is new diagnostic tool for dynamic testing; **December;** p. 14.

Webster, Peter, Voller, L.A.; Emulation is new diagnostic tool for dynamic testing; **December;** p. 14.

Weston, F. C. "Ted" Jr.; Functional goals are often in conflict with each other; **November;** p.25.

Whiteley, Linda; New roles for manufacturing in concurrent engineering; **November;** p. 51.

Wilkinson, Richard; Reengineering: industrial engineering in action; **August;** p. 47.

Wyskida, Alan R. Maddux, Gary A. Amos, Richard W.; Organizations can apply quality function deployment as strategic planning tool; **September;** p. 33.

Yilmaz, Mustafa, Chatterjee, Sangit; American management must change its view of quality as a"necessary evil;" **October;** p. 44.

Ziemke, M. Carl, Spann, Mary S.; Warning: Don't be halfhearted in your efforts to employ concurrent engineering; **February;** p. 45.

Proceedings: 1991 International Industrial Engineering Conference (Detroit May 19-22, 1991)

Subjects And Titles

SYSTEMS INTEGRATION

The integration of work redesign and information technology; Powers, John J.; Liotti, Anthony T.; p. 3.

Fundamentals of systems integration; Bontadelli, James, Kirby, Kenneth; p. 13.

Vision into action: An overview; Samuels, John A., Ogg, Alexander; p. 23.

Cost management and performance measurement in integrated systems; Bonsack, Robert A., Donnelly, Joseph; p. 37.

IIE certification program in systems integration; Hess, David W.; p. 41.

Modular software for integrated factory management systems; Vogel, Steven A.; p. 61.

Managing discrete projects in a systems integration initiative; Pratt, David B.; p. 71.

Benchmarking the soft and hard sides of the manufacturing excellence; Stautner, Michael F., Mize, Joe E.; p. 81.

Applying the lessons learned in improving manufacturing operations; Krupka, Dan C.; p. 91.

CIM at Apple Computer, Inc.-a case study; Kaskowitz, Michael; p. 97.

TIME-BASED COMPETITION

Redesigning products for a time-based competitive advantage; Mather, Hal; p. 107.

Sales and operations planning: just in the nick of time; Bose, Gerald J., Welch, James A.; p. 117.

The SMED system for setup reduction-a case study; Szatkowski, Paul M., Reasor, Roderick J.; p. 123.

Lead time reduction in the warehouse; Daly, Frank, Griffith, Dennis; p. 131.

Determination of optimal intermediate storage capacity; Houshyar, Abdolazim; p. 139.

TOTAL QUALITY MANAGEMENT

Breakthrough thinking: a new problem-solving paradigm for total quality management; Ralston, David W., Nadler, Gerald; p. 151.

Quality improvement through robust design; Kapur, Kailash; p. 159.

Process evaluation, control, and improvement: an approach for improving operating team effectiveness; Sandidge, David M., Stump, David C.; p. 169.

REDESIGNING FOR IMPROVED PERFORMANCE

Integrated change management: 2000+; White, Donald E.; p. 177.

Predictive technology: the need to integrate; Burres, Keith E.; p. 189.

Performance management framework; Kaminsky, Nicholas J.; p. 197.

A supervisory compensation plan based on performance; Garcia-Diaz, Alberto, Das, Biman, Sen, Pradyot K.; p. 203.

A computer-based model for performance analysis of production workers: a case study; Ntuen, Celestine A., Park, Eui H., Wright, Ursula R.; p. 213.

A paradigm shift in thinking as a strategic advantage; Nadler, Gerald; p. 221.

Assessing modular and cellular manufacturing; Ross, James R.; p. 231.

Changing the maintenance culture in a traditional manufacturing environment; Hacker, Marla E.; p. 241.

Competency-based certification for team development; Adair, Mike; p. 249.

Multifunctional equipment design teams; Newman, Anne E.; p. 253.

Group productivity through functional analysis; Fliss, Jeffrey S.; p. 263.

Organizing an unsuccessful team; Morris, Richard M. III; p. 271.

Teamwork-what's in it for us?; Hayes, Jim; p. 279.

High performance manufacturing through self-guiding teams; Hayes, Thomas E., Snider, Glendon W.; p. 285.

BUILDING A CAREER IN A CHANGING FIELD

Industrial engineering's role in the emerging theory of manu-
